Poset chomp

To play the game *Poset Chomp*, we start with a finite poset S. Players take turns removing elements of S. If we remove a, we have to remove all b with $a \preceq b$.

Poset chomp

To play the game *Poset Chomp*, we start with a finite poset S. Players take turns removing elements of S. If we remove a, we have to remove all b with $a \preceq b$.

1. Interpret *Chomp* as the Poset Chomp of a poset.

Poset chomp

To play the game *Poset Chomp*, we start with a finite poset S. Players take turns removing elements of S. If we remove a, we have to remove all b with $a \preceq b$.

1. Interpret *Chomp* as the Poset Chomp of a poset.
2. Interpret Nim$(2, 3)$ as the Poset Chomp of a poset.

Divisor poset chomp

Let S be the divisor poset of 30 excluding the number 1. Is PosetChomp(S) an N-game or a P-game?

Divisor poset chomp

Let S be the divisor poset of 30 excluding the number 1. Is PosetChomp(S) an N-game or a P-game? What is the winning move?

Adding

Let S be the divisor poset of 30 excluding the number 1. Is $\mathsf{PosetChomp}(\mathsf{S}) + \mathsf{Nim}(4, 4)$ an N-game or P-game?

N+P is P; P+P is P

Theorem

1. $N + P = P$
2. $P + P = P$

N+N could be either!

Find an example where an N-game + an N-game is a P game.

N+N could be either!

Find an example where an N-game + an N-game is a P game.

Find an example where an N-game + an N-game is an N game.
